

-Grade Level 8		Teacher/Room: Sue Watters/ 148 Week of: 3-6-17
Unit Vocabulary: electric charge, electric field, static charge, induction, electric potential, volt, conductor, insulator, resistance, ohm, grounding, electric current, ampere, Ohm's Law, electric cell, circuit, resistor, short circuit, series circuit, parallel circuit		
Monday 3-6-17		
CC Standards:		
	STEM 2-3rd	Science 1 st and 4 th
Instructional Strategies/ Resources Used:		
Learning Target	I know how a circuit functions.	I know how a circuit functions.
Activating:	BrainPop Circuits	
Class Activity:	1. warm-up Fiber Optics- write 3 facts that you didn't know https://www.youtube.com/watch?v=0MwMkBET_5I https://www.youtube.com/watch?v=o5t6evogJbg 2. PowerPoint Notes- Circuits 3. Chapter 20 (20.1 and 20.2) Vocabulary in Frayer Model Circuit Diagrams Chapter 20 – draw 5 common circuit parts in your composition notebook (p.668 and 669)	1. Warm-up- How does an inclined plane make it easier to move heavy items? 2. PowerPoint Notes- Circuits 3. Chapter 20 (20.1 and 20.2) Vocabulary in Frayer Model
Assessment		
Homework:	Finish vocabulary/ Notebook Check tomorrow	Finish vocabulary/ current event Friday
Differentiation:		
Tuesday 3-7-17		
CC Standards: S8P5. Students will recognize characteristics of gravity, electricity, and magnetism as major kinds of forces acting in nature. b. Demonstrate the advantages and disadvantages of series and parallel circuits and how they transfer energy. c. Investigate and explain that electric currents and magnets can exert force on each other.		

	STEM-	Science-
Instructional Strategies/ Resources Used:	http://tryengineering.org/sites/default/files/lessons/serpar_0.pdf	
Learning Target	I can describe the parts of a circuit.	I can describe the parts of a circuit.
Activating:		
Class Activity	<p>1. Notebook Check</p> <p>2. Electricity Lab Day 1</p> <p>Rotation #1-Chromebook- Finish Study Island 'Electric Charge' with a score of 80%</p> <p>Rotation #2 Complete the handout that accompanies the Google Classroom Electricity Interactives and put in your notebook</p> <p>Rotation #3 Get a bag of circuit materials and build a circuit following the guidelines OR use the circuits kit</p> <p>Rotation #4 building: work on the wave pendulum or investigate one of the machines with motors that is being torn apart- write a paragraph about how it works internally</p>	<p>1. Warm-up- What does a chemical formula show?</p> <p>2. Electric Notebook Check</p> <p>3. Computer Lab Electric charge with a score of 70% or greater; then work on Google classroom handout</p>
Homework:		Notebook work not finished
Differentiation:	Study Island pass rate	Study Island pass rate
Assessment		

Wednesday 3-8-17

CC Standards:

S8P5. Students will recognize characteristics of gravity, electricity, and magnetism as major kinds of forces acting in nature.

a. Recognize that every object exerts gravitational force on every other object and that the force exerted depends on how much mass the objects have and how far apart they are.

b. Demonstrate the advantages and disadvantages of series and parallel circuits and how they transfer energy.

c. Investigate and explain that electric currents and magnets can exert force on each other.

	STEM	Science
Instructional Strategies/ Resources Used:	Hands on	Hands on
Learning Target	I can complete an electric circuit.	I can complete an electric circuit..
Activating:		

Class Activity:	<p>Electricity Lab Day 2</p> <p>Rotation #1-Chromebook- Finish Study Island 'Electric Charge' with a score of 80%</p> <p>Rotation #2 Complete the handout that accompanies the Google Classroom Electricity Interactives and put in your notebook</p> <p>Rotation #3 Get a bag of circuit materials and build a circuit following the guidelines OR use the circuits kit</p> <p>Rotation #4 building: work on the wave pendulum or investigate one of the machines with motors that is being torn apart- write a paragraph about how it works internally</p>	<p>Explore electric circuits using hands on kits and boards.</p> <p>Follow the guidelines to create multiple circuits then answer the questions and draw what you built.</p>
Assessment:	Formative observations during labs	Formative observations during labs
Homework:		
Differentiation:	Kit components/ guidelines vary	
Thursday 3-9-17

Class Activity:	<p>March Current Event</p> <p>1. Engineering Concepts: Investigate how advancements in circuits have improved technology.</p>	<p>1. Warm-up-</p> <p>2. Work on March Current Event available on Google Classroom- due on Next Wednesday</p>
Assessment:		
Homework:		
Differentiation:	Engineering concepts	

8th Grade Standards

Co-Requisite – Characteristics of Science Habits of Mind

S8CS1. Students will explore the importance of curiosity, honesty, openness, and skepticism in science and will exhibit these traits in their own efforts to understand how the world works.

- a. Understand the importance of—and keep—honest, clear, and accurate records in science.
- b. Understand that hypotheses can be valuable even if they turn out not to be completely accurate.

S8CS2. Students will use standard safety practices for all classroom laboratory and field investigations.

- a. Follow correct procedures for use of scientific apparatus.
- b. Demonstrate appropriate techniques in all laboratory situations.
- c. Follow correct protocol for identifying and reporting safety problems and violations.

S8CS3. Students will have the computation and estimation skills necessary for analyzing data and following scientific explanations.

- a. Analyze scientific data by using, interpreting, and comparing numbers in several equivalent forms, such as integers, fractions, decimals, and percents.
- b. Find the mean, median, and mode and use them to analyze a set of scientific data.
- c. Apply the metric system to scientific investigations that include metric to metric conversions (i.e., centimeters to meters).
- d. Decide what degree of precision is adequate, and round off appropriately.
- e. Address the relationship between accuracy and precision.
- f. Use ratios and proportions, including constant rates, in appropriate problems.

S8CS4. Students will use tools and instruments for observing, measuring, and manipulating equipment and materials in scientific activities utilizing safe laboratory procedures.

- a. Use appropriate technology to store and retrieve scientific information in topical, alphabetical, numerical, and keyword files, and create simple files.
- b. Use appropriate tools and units for measuring objects and/or substances.
- c. Learn and use standard safety practices when conducting scientific investigations.

S8CS5. Students will use the ideas of system, model, change, and scale in exploring scientific and technological matters.

- a. Observe and explain how parts can be related to other parts in a system such as the role of simple machines in complex machines.
- b. Understand that different models (such as physical replicas, pictures, and analogies) can be used to represent the same thing.

S8CS6. Students will communicate scientific ideas and activities clearly.

- a. Write clear, step-by-step instructions for conducting scientific investigations, operating a piece of equipment, or following a procedure.

- b. Write for scientific purposes incorporating information from a circle, bar, or line graph, data tables, diagrams, and symbols.
- c. Organize scientific information in appropriate tables, charts, and graphs, and identify relationships they reveal.

S8CS7. Students will question scientific claims and arguments effectively.

- a. Question claims based on vague attributions (such as “Leading doctors say...”) or on statements made by people outside the area of their particular expertise.
- b. Identify the flaws of reasoning in arguments that are based on poorly designed research (e.g., facts intermingled with opinion, conclusions based on insufficient evidence
- c. Question the value of arguments based on small samples of data, biased samples, or samples for which there was no control.
- d. Recognize that there may be more than one way to interpret a given set of findings.

The Nature of Science

S8CS8. Students will be familiar with the characteristics of scientific knowledge and how it is achieved.

Students will apply the following to scientific concepts:

- a. When similar investigations give different results, the scientific challenge is to judge whether the differences are trivial or significant, which often requires further study. Even with similar results, scientists may wait until an investigation has been repeated many times before accepting the results as meaningful.
- b. When new experimental results are inconsistent with an existing, well-established theory, scientists may pursue further experimentation to determine whether the results are flawed or the theory requires modification.
- c. As prevailing theories are challenged by new information, scientific knowledge may change.

S8CS9. Students will understand the features of the process of scientific inquiry.

Students will apply the following to inquiry learning practices:

- a. Investigations are conducted for different reasons, which include exploring new phenomena, confirming previous results, testing how well a theory predicts, and comparing different theories. Scientific investigations usually involve collecting evidence, reasoning, devising hypotheses, and formulating explanations to make sense of collected evidence.
- b. Scientific investigations usually involve collecting evidence, reasoning, devising hypotheses, and formulating explanations to make sense of collected evidence.
- c. Scientific experiments investigate the effect of one variable on another. All other variables are kept constant.
- d. Scientists often collaborate to design research. To prevent this bias, scientists conduct independent studies of the same questions.

- e. Accurate record keeping, data sharing, and replication of results are essential for maintaining an investigator's credibility with other scientists and society.
- f. Scientists use technology and mathematics to enhance the process of scientific inquiry.
- g. The ethics of science require that special care must be taken and used for human subjects and animals in scientific research. Scientists must adhere to the appropriate rules and guidelines when conducting research.

Co-Requisite – Content

S8P1. Students will examine the scientific view of the nature of matter.

- a. Distinguish between atoms and molecules.
- b. Describe the difference between pure substances (elements and compounds) and mixtures.
- c. Describe the movement of particles in solids, liquids, gases, and plasmas states.
- d. Distinguish between physical and chemical properties of matter as physical (i.e., density, melting point, boiling point) or chemical (i.e., reactivity, combustibility).
- e. Distinguish between changes in matter as physical (i.e., physical change) or chemical (development of a gas, formation of precipitate, and change in color).
- f. Recognize that there are more than 100 elements and some have similar properties as shown on the Periodic Table of Elements.
- g. Identify and demonstrate the Law of Conservation of Matter.

S8P2. Students will be familiar with the forms and transformations of energy.

- a. Explain energy transformation in terms of the Law of Conservation of Energy.
- b. Explain the relationship between potential and kinetic energy.
- c. Compare and contrast the different forms of energy (heat, light, electricity, mechanical motion, sound) and their characteristics.
- d. Describe how heat can be transferred through matter by the collisions of atoms (conduction) or through space (radiation). In a liquid or gas, currents will facilitate the transfer of heat (convection).

S8P3. Students will investigate relationship between force, mass, and the motion of objects.

- a. Determine the relationship between velocity and acceleration.
- b. Demonstrate the effect of balanced and unbalanced forces on an object in terms of gravity, inertia, and friction.
- c. Demonstrate the effect of simple machines (lever, inclined plane, pulley, wedge, screw, and wheel and axle) on work.

S8P4. Students will explore the wave nature of sound and electromagnetic radiation.

- a. Identify the characteristics of electromagnetic and mechanical waves.
- b. Describe how the behavior of light waves is manipulated causing reflection, refraction diffraction, and absorption.
- c. Explain how the human eye sees objects and colors in terms of wavelengths.
- d. Describe how the behavior of waves is affected by medium (such as air, water, solids).
- e. Relate the properties of sound to everyday experiences.
- f. Diagram the parts of the wave and explain how the parts are affected by changes in amplitude and pitch.

S8P5. Students will recognize characteristics of gravity, electricity, and magnetism as major kinds of forces acting in nature.

- a. Recognize that every object exerts gravitational force on every other object and that the force exerted depends on how much mass the objects have and how far apart they are.
- b. Demonstrate the advantages and disadvantages of series and parallel circuits and how they transfer energy.
- c. Investigate and explain that electric currents and magnets can exert force on each other.
